ABSTRACT:

PURPOSE: To easily specify who is a speaker by identifying the presence or absence of the speech of each participant according to the voice level of the conference participant, and discriminating the participant in a speaking state from the identified result.

CONSTITUTION: Picture display windows 31-35 are assigned to members participating an electronic conference. Next, the moving images of the participants are displayed at the picture display windows 31, 32, and 33 among the picture display windows 31-35. Next, whether or not a line is connected is monitored. Then, whether or not the other party in the conference is speaking at present is monitored, and a certain mark is displayed at the assigned picture display windows 31-33 when the other party in the conference is speaking according to the monitored result, and the displayed mark is erased when the other party in the conference is not speaking. The form of displaying a red rectangular marker in a window display frame, and flashing it is used as the mark indicating that the other party in the conference is speaking.
